(54) Blood-pressure measurement apparatus capable of heart function assessment

(57) An apparatus (10) for blood pressure measurement capable of heart function assessment for readily putting on a living subject, comprising an inflatable cuff including a pressure-pulse-wave sensor (28), which is combined with the cuff at an upper-stream side end of the cuff, when wrapped around an upper-arm portion (14), so as to detect, at the upper-stream side than a blood-flow stopped position, the pressure-pulse-wave, which is of the same waveform as an aorta waveform, while blood-flow is stopped, and an ejection time calculating means (a heart function parameter calculating

means) (100), by which an ejection time ET can be calculated as a time difference from a rising-point to a di-crotic notch of the pressure-pulse waveform for heart function assessment. Since a blood pressure BP also can be measured with the cuff (12), all the putting on the living subject, that is needed to measure the blood pressure and heart-function is to put on the cuff (12), which is combined with the pressure-pulse wave sensor (28), and to wrap the cuff around the upper-arm portion (14), therefore, putting-on becomes more simple and easier for measuring a heart function parameter and a blood pressure.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 01 2513

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
